## **ABOUT US**

The history of Mini Mobile House dates back to 2015 when the company was founded with a clear mission: to build durable, timeless year-round and recreational houses, garden saunas, commercial and service pavilions, and various types of structures. Our passion for creating functional, aesthetic, and eco-friendly mobile buildings has become the foundation of our brand.

At the heart of our approach are the knowledge and experience gained in the construction industry. We rely on the extensive experience we have acquired while working on various construction projects throughout the European Union. This knowledge allows us not only to effectively design and build our houses and saunas but also to continuously improve and respond to the changing needs of customers and the construction market.

We strive to ensure that each of our products is not only practical and solid but also aesthetic and environmentally friendly. Therefore, in our work, we use modern technologies and materials that enable us to achieve high-quality standards while minimizing the negative impact on the natural environment.

The Mini Mobile House brand is not just about houses and saunas—it is a building philosophy that emphasizes quality, durability, and sustainable development. Our products are dedicated to those who value mobility, comfort, and harmony with the surrounding nature.

### **Our Mission**

Our goal is to create spaces that combine modern design with functionality and an ecological approach. We believe that every home should be a place that not only provides comfort but also harmonizes with nature. Therefore, our projects are designed with minimal environmental impact in mind, utilizing sustainable materials and energy-efficient technologies.

### **Our Values**

- **Quality:** We emphasize the highest quality of execution, paying attention to every detail of our products.
- **Innovation:** We are constantly seeking new, better solutions that allow us to meet our customers' expectations.
- **Ecology:** Our buildings are designed with the environment in mind, using eco-friendly materials and technologies.
- **Trust:** We build long-term relationships with our customers based on trust and transparency.

## Our Projects

We carry out projects for both individual customers and businesses. Each project is unique to us, which is why we approach it with full commitment, tailoring solutions to individual needs and expectations. Our offer includes:

- **Year-round and recreational houses**
- **Garden saunas**
- **Commercial and service pavilions**
- **Other wooden structures**

We invite you to cooperate and contact our team to learn more about our products and collaboration opportunities.

## **Advantages of Modular Construction**

1. **Fast Construction Time:** Our modules are manufactured concurrently with site preparation work, significantly reducing the overall construction time compared to traditional building methods. This allows buildings to be operational more quickly, benefiting both investors and future users.
2. **Design Flexibility:** The modular nature of the construction allows for easy adaptation of projects to individual client needs. Modules can be modified, expanded, and combined into various configurations, enabling the creation of unique and personalized architectural solutions.
3. **Quality Control:** Modules are produced in controlled factory conditions, ensuring high material quality and precise execution. Each module undergoes thorough quality testing, which minimizes the risk of defects and ensures the durability of the construction.
4. **Reduced Weather Risk:** Construction work carried out inside the factory is unaffected by weather conditions, eliminating the risk of delays and allowing for precise project scheduling. This makes the construction process more efficient and predictable.
5. **Sustainable Development:** Modular construction is more environmentally friendly than traditional methods. Waste reduction, efficient material use, and lower energy consumption during production contribute to a reduced carbon footprint of buildings.
6. **Cost Efficiency:** Modular construction is often more cost-effective due to controlled manufacturing costs and shorter construction times. Savings from production efficiency and reduced project duration can lead to lower overall costs for clients.
7. **Mobility:** Modules can be easily transported and installed at various locations. This makes modular construction an ideal solution for temporary projects, portable buildings, and situations where mobility is a key requirement.
8. **Precision and Repeatability:** The factory production process ensures high precision in construction and consistency in each module. This ensures that the quality of modular buildings remains high, regardless of the location and timing of their production.

**If you need additional information or wish to discuss details,  
we are at your disposal.**
